

mFuga

With mFuga, Sonetas delivers a mobile and offline version of Fuga, which allows the vet to enter data in an internet free area with displacement consultations. With your smartphone or tablet, you can quickly consult your agenda, enter consultations, or view information from your customers or patients. Additionally, you can schedule new appointments in your Fuga agenda.

The app can be used on the three major smartphone operating systems: Android®, iOS® (Apple), and Windows Phone®.
